NAME

t1binary − convert type-1 font from ASCII to binary

SYNOPSIS

t1binary [**−l** *length*] [*input* [*output*]]

DESCRIPTION

t1binary converts Adobe type-1 font programs in PFA (hexadecimal) format to PFB (binary) format. If the file *output* is not specified output goes to the standard output. If the file *input* is not specified input comes from the standard input. In this way **t1binary** can be used as a filter.

OPTIONS

−l *length* Set the maximum length of sections in PFB output to *length.* Default value is large, 2**17 - 6, yielding section size, including section header, of 128 Kbytes.
